

## **User Guide**

ListAndRename is a Windows desktop application designed to efficiently list files within a folder and export that list to various formats, including Excel, CSV, and text files.

Additionally, it offers the functionality to rename files and folders based on the new names provided in the generated list.

## Description

This document serves as a comprehensive user guide for the Windows Desktop Application, **ListAndRename**.

#### Function

The application offers two key functionalities.

- Generate a comprehensive list of the contents within a folder, including all files and subfolders.
- Rename files and folders in bulk according to a user-provided list.

ListAndRename creates a comprehensive list of folder contents and saves it to a file. It also offers an optional additional column for new file and folder names, facilitating the bulk renaming of files and folders using the same list.

#### Pre-requisite

- This application is exclusively designed for Windows desktops and laptops running Windows 10 or newer versions.
- The application requires a minimum screen width of 1024 pixels and a minimum screen height of 720 pixels when displayed at 100% scale.

#### Version Control

Version 1.25.04.11

## ListAndRename

This application offers the following functionalities.

- 1. **List Generation** Generate a comprehensive list of files and folders within the specified path, drive, or folder, and save the output in various file formats, including CSV, Microsoft Excel, and Text.
- Bulk Rename User updates the names of new files and folders in the list. This process can be conducted either manually or semiautomatically, depending on the user's preferences and the volume of records involved.

To rename files, simply upload or drag and drop rename data file into the application. The application will then rename files and folders according to the specified list.

#### Note

When renaming, the application verifies the following conditions.

If a file or folder name appears multiple times within a single parent folder, the application will display an error message. It requires the user to address the issue and upload a corrected list, as a folder cannot contain files or subfolders with identical names.

If new names are found among the current names, the application will display a warning and request confirmation to either proceed or cancel if the new file and folder names already exist in the current list. Attempting to rename a file or folder that shares a name with an existing file or folder may result in an error.

The application disregards the record if the new name matches the current name, or if either the current or new name is left blank.

The application does not rename files and folders that are locked, missing, or inaccessible due to reasons such as insufficient read or write permissions.

The application disregards records that contain invalid characters, which are not permitted as file name characters by the Microsoft Windows operating system.

#### **1. List Generation:**

#### A. Start

Open the application by clicking the icon in the Windows Start menu or search for "ListAndRename" in the taskbar's Windows Search.

The application launches as illustrated below. The colour may vary based on the chosen theme. Please refer to the end of this document for details on the UI theme.

#### B. Open Folder

Position the cursor in the upper left corner of the application window and find the 'Folder' section.

Folder	_
Selected Path	
List without File Extension	Browse
List for Renaming	
Auto Apply / Refresh List	Apply

- Select 'List without File Extension' if files are to be listed without file extensions.
- Select the check box 'List for Renaming.'

Selecting 'List for Renaming' adds a new column to the list file for the new name. Only CSV and Excel files are utilized for the renaming process.

#### Select the check box 'Auto Apply / Refresh List.'

The 'Auto Apply / Refresh List' feature instantly generates a list of contents when a folder is selected or when any filter parameters are changed. If this option is not enabled, the user must click 'Apply' to generate the list.

Click the 'Browse' button to open the folder dialog, as illustrated below.

Browse through the folder list and choose a folder or drive to generate a list of its contents. For example, select D:\Documents as shown below.

Click OK to choose the folder.

The application creates a list of files and folders based on the specified content filter within the chosen path, presenting the results in a list view, as illustrated below.

Note – Drag and Drop folder to create list.

- To select a path or folder, simply drag and drop a folder or file onto the List view area.
- Dropping a folder will generate a list of its contents,
- Dropping one or more files will produce a list of the contents of the parent folder containing those files.

Cancel any ongoing process such as generating a list, saving a list, or renaming files by clicking the 'Abort' button. This button will turn red while an operation is in progress, indicating that the action can be halted.

Working					•		
Auto Fit Columns	Drop Rename Data File Or Click	¢	1	⇒	Abort	Reset	Close

#### Dropped object.

- If the dropped object is a folder: The application generates a list of the folder's contents based on the selected filters (see the next section for details on filters).
- If the dropped object is a file: The application generates a list of the contents of the file's parent folder based on the selected filters (see the next section for details on filters).

• If the dropped object is a shortcut to a folder or file: The application offers to list the contents of the target folder or the parent folder of the target file.

- If the dropped object is a shortcut to another shortcut: The application offers to list the contents of the final target folder or the parent folder of the final target file.
- The list might not be generated if the Shortcut target is redirected by Windows System File. (E.g., a shortcut file with target C:\Program Files may be redirected to C:\Program Files (x86))

#### • Filtering the list.

The application offers features to narrow down the list by applying filters based on names and file types.

i. Choose files or folders that contain a particular name or text within their title.-

Enter the name in the text box and choose the appropriate option from the dropdown menu.

The options available in the dropdown menu are listed below.

#### Name Contain

Files and folders with names that include the specified text.

#### Name start with

Files and folders that begin with the specified text.

#### Name end with

Files and folders with names that end with the specified text should be included in the search, ensuring that the file extension is part of the search term.

#### Name is.

Files and folders with names that exactly match the entered text, regardless of case, should include the file extension in the search term.

E.g., Create a list of files and folders that begin with the word "Rose" by selecting the option "Name Starts With" and input "Rose" in the search box.

The application displays files and folders whose names begin with "Rose" or "rose." For example, it includes entries such as Rosemerry, rose Pink, rosebuds, and rose flower.

#### ii. Scope of list

In the content filter, choose the appropriate checkboxes to include the desired content in the list, such as Files, Folders, Subfolders, and Subfolder files. Selecting Subfolders and Subfolder files will encompass all contents within every folder located inside the specified folder or path.

#### iii.Additional filters based on file types.

The application determines which file types (extensions) to include or exclude from the list based on the status of the 'Exclude files' checkbox. If the checkbox is checked, certain file types are omitted; if unchecked, all relevant file types are included.

E.g., to filter the list of files, enter 'jpg, bmp, txt' in the search box. The application will then display only those files with the extensions .jpg, .bmp, or .txt.

Extensions, whether they include a prefixed '? or not, function in the same manner. For example, both "txt" and ".txt" result in same list.

An example of utilizing all available filters effectively.

An example of files with the .jpg extension that include the word 'April' in their filenames can be found by searching through subfolders and their contents. The listed files are two .jpg images that contain 'April' in their names.

**Group by type** – Check this checkbox if you want the list to be displayed in groups. For example, .bmp files can be grouped together, .docx files in another group, and folders in a separate group. Below is a list of files organized by their extensions.

#### iv. Other

#### (a) Sort

Sort the information by columns such as Name, Date, Bytes, or Parent folder, the application defaults to sorting the list by Name in ascending order. <u>When the list is organized into groups</u>, the sorting occurs within each group. For example, if sorted by name in ascending order, BMP files will be listed alphabetically, followed by CSV files listed alphabetically beneath them.

Alternatively, clicking on the respective column header will sort the list according to the selected column.

The status section displays the following details about the selection:

- Access Restrictions: Indicates if there are any restrictions.
- Number of Files Selected: The total count of selected files.
- Number of Folders Selected: The total count of selected folders.
- Time Taken: The duration required to generate the list.
- Total File Size: The combined size of the selected files (folders are not included).
- Shortcut Status: Displays whether the dropped file is a shortcut.

#### (d) 'Auto Fit Columns'

Adjust the width of the list view by clicking on 'Auto Fit Columns.' This action will expand the column widths, constrained by the available screen width.

A double-clicking a file in the list produces a list of contents for the file's parent folder, provided that the parent folder differs from the currently selected folder.

#### (f) Clicking a shortcut in the list.

If the selected item in the list is a shortcut, application offers to list contents of the target folder or target file's parent folder.

#### (h) History

The application keeps a track of the source folder/drive for which content lists created in the current session. This can be accessed using the History buttons: the backward and forward arrows, as illustrated in the following images. Please note that the history is cleared when the application is closed.

History	backward
---------	----------

**Note:** The application retains only the folder/drive paths in the session history, not the previously generated lists of their contents. On clicking the *History* button, the application generates a new list based on the folder's current contents.

#### C. Save List to file.

The default file name format is as follows:

List\_FolderName\_yyyyMMdd\_hh:mm:ss. In this format, "yyyyMMdd" represents the date in the order of year, month, and day, while "hh:mm:ss" indicates the computer's time in hours, minutes, and seconds.

If the Filename Suffix checkbox is unchecked, the file name will default to List\_FolderName.

- Maintaining the filename suffix is crucial for identifying the date and time of list creation, particularly in environments where there is a high rate of file creation, modification, or deletion.
- The suffix enables the generation of multiple lists within a folder while preserving the existing lists.
- The suffix is updated with the current date and time whenever the list application creates, updates, or selects a new folder or path for listing. Clicking the Reset Button refreshes the suffix to reflect the current date and time. However, if the user manually updates the suffix, it will not be automatically refreshed until a new folder or path is selected for listing.

Save					
Filename (List)	List_Documents_Custom_Suffix				
🗹 Date Suffix	_Custom_Suffix	Reset			

- Check checkbox 'CSV' to save the list to CSV file. \*
- Check checkbox 'Excel' to save the list to Microsoft Excel file. \*
- Check checkbox 'Text' to save list to a text file.

Checking multiple options allows you to save files in all the selected formats.

- Enabling the 'Auto Save' feature for CSV, Excel, and Text files allows for automatic saving of the list in the respective file formats, eliminating the need for user intervention to click any buttons.
- To automatically open the saved file lists, ensure that the checkbox labelled 'Open File(s)' is checked.
- Save a file without prompting the user to select a folder by checking the 'Skip File Dialogue' checkbox. By default, the application saves the file to the parent directory of the chosen folder. If the selected path is a drive location, such as C:\ or D:\, the file will be saved in the same location.

(The checkbox for "Skip File Dialogue" will be automatically selected if the Autosave feature is enabled.).

#### Note

Saving a file may fail if the user lacks sufficient write access permissions for the selected drive or folder. In this case, uncheck the 'Skip File Dialogue' option to choose a different save location.

Enabling the checkboxes for 'Autosave', 'Skip File Dialogue', and 'Open Saved File', along with any selected file formats, generates a list, saves it to a file, and opens the file automatically without requiring user intervention.

In the following example, dragging a folder into the application will generate a list, save it as a CSV file, and open the CSV file immediately.

Save	
Filename (List)	
🗹 Date Suffix	Reset
List Format	🗹 Excel 🗹 CSV 🗹 Text
🗹 Auto Save	🗹 Open File(s)
🗹 Skip File Dialo	ogue Save

• When the 'Skip File Dialogue' option is unchecked, the user is prompted to select, change, or confirm the file name and destination folder.

• If the 'Auto Save' checkbox is unchecked, click the save button to store the list in the chosen file formats.

Save	
Filename (List)	
🗹 Date Suffix	Reset
List Format	🗹 Excel 🗹 CSV 🗹 Text
🗹 Auto Save	🗹 Open File(s)
🗹 Skip File Dialo	ogue Save

User gets confirmation of saved files as shown in example below.

If a list file with the same name already exists, the application appends a numeric suffix, such as 0000, 0001, 0002, 0003, ..., up to 9999, to the existing file name and then saves the file with the updated name.

- List\_Documents\_20241217\_074522.csv
- List\_Documents\_20241217\_074522\_0000.csv
- List\_Documents\_20241217\_074522\_0001.csv
- List\_Documents\_20241217\_074522\_0002.csv

• Saving excel file by Microsoft Office Interop.

In uncommon situations, you might encounter the following message if the XML library is unable to generate an Excel file. This message indicates that the application will create an Excel file using Microsoft Office Interop Services.

Excel Dependency	
The application is about to create an Excel file using N services. This process requires Microsoft Office to be i accessible by the logged-in user. The time required depends on the size of the data. If th or the application becomes unresponsive, you can clic operation. For a faster alternative, you can save the list as a CSV f opened in Excel. Click 'Yes' to proceed with writing to Excel (this may ta to continue?"	flicrosoft Office Interop nstalled, running, and he process takes too long ck 'Abort' to cancel the file, which can also be ke longer). Do you want
Do not show this message again.	Yes No

#### Note

Saving a list in Microsoft Excel format typically utilizes the XML library, which functions effectively. However, if XML writing fails for any reason, the application will attempt to use Microsoft Office Interop services to save the list to an Excel file. In this case, the user must have an active Microsoft Office session on their computer.

In the rare event that the application cannot create an Excel file, it will save the list as a CSV file, which can then be opened in Microsoft Excel for further editing. Once opened, the CSV file can be converted into an Excel file.

Operations with Microsoft Excel files take more time than CSV files.

\*Feature of saving to CSV or Excel is not part of basic (Free) version. The feature is activated by Add On or is available as part of free trial if applicable.

The saved file, whether in CSV or Excel format, is presented in the format shown below. Note that the text file does not contain distinct columns; however, the application maintains the original sequence of the text when writing the file.

Column A-	Name	Current File /Folder Name
Column B -	New File / Folder Name	New File/Folder Name
Column C-	Туре	Folder or File (extension)
Column D-	Date	Last modified date
Column E-	Bytes	Size in Bytes
Column F-	File Size	File size in higher unit
Column G-	File Size Unit	KB, MB, GB etc
Column H-	File parent	Parent folder

The application includes a column labelled "New File/Folder Name" (Column B) in the file, but only if the "List for renaming" option is selected.

Column B contains identical values to those in Column A, the names of existing files and folders.

All cells, except for Column B, are protected to prevent accidental changes to the current file names and parent folder. This data is essential for renaming files and folders, which is done using the new names entered in Column B.

Certain Excel functions are not available on a protected sheet. To access these functions, you must unprotect the sheet by right-clicking on the sheet name and selecting 'Unprotect Sheet.'

Unprotect sheet to make changes.

Right Click sheet name -- > Click 'Unprotect.'

#### Note

Column I has hash codes used to check data integrity for rename file. **Do not change any value in column I**. Else the file (data) will cause and error.

#### 2. Rename files and folders.

Before editing the generated list file, create a backup copy to safeguard against potential data corruption, typographical errors, or any other issues that could render the file unusable or lead to significant, irrecoverable changes.

#### a) Update new name.

The file includes a column titled "New File/Folder Name" (Column B), which is duplicated from the "Name" column (Column A). (Refer to the image below.)

6	Name	New File/Folder Name	Туре	Date Modified	Bytes	File Size	Size Unit	Parent Folder

#### b) Spreadsheet functionalities to update new names.

• Advanced users utilize functions such as add, remove, replace, append, truncate, concatenate, and trim to efficiently update names across multiple records. To access these functions in a Microsoft Excel file, it is necessary to unprotect the sheet.

• If the number of records is manageable, you can manually enter or edit new file and folder names. This can be accomplished on a protected sheet, as column B is unlocked by default.

#### c) Precaution

- **Do not remove** or alter file extensions in Column C unless you intend to change the file type and are confident in your actions.
- **Do not modify the File Parent** in Column H, as doing so will result in the record being skipped with a log message indicating "File not found."
- The application will disregard records if the new file name matches the current file name. It is recommended to eliminate such records from the file if you do not plan to rename those files or folders.
- Avoid using invalid filename characters such as <, >, |, \, :, and "," in filenames, as the application will ignore these records and log an error.
- d) Save updated file.

Save and close the file with the updated names.

#### Note –

When a CSV file is opened in Microsoft Excel, you can save it by clicking the Save icon or using the shortcut Ctrl + S. If you close the file directly, a 'Save' dialog will appear, prompting you to save the file as an Excel format instead of a CSV.

#### 3. Upload or drop file for Renaming.

The input for renaming the data file offers three distinct methods for uploading files to the application.

1. Drag and drop file to button.

Upload a file simply by dragging and dropping it onto the button displayed on the application screen.

	Name	Туре	Date Modified	Bytes	File Si	Unit	Parent

To select the file, choose it from the list and click the Open button.

The application initiates the renaming of files and folders based on the provided list immediately after the file upload is completed.

CSV files offer quicker reading and renaming capabilities. If the renaming process is taking too long or you wish to cancel it for any reason, simply press 'Abort.' The text will turn red while the renaming operation is in progress.

If the uploaded file was not created using ListAndRename, a notification will be displayed.

← 1 ⇒

If the uploaded file is generated by the ListAndRename application from another version or computer, the following warning message is displayed. This warning does not stop the renaming process.

When uploading a file for renaming, you may encounter the following messages:

Duplicate Names in Input File: This message appears when the input file list contains duplicate names for files or folders within the same parent folder.

Conflict with Existing Names: These messages are shown when an existing file or folder has the same name as a new file or folder name. This may create conflicts, and the affected files may not be renamed.

#### **Renaming Status**

The application provides a status update for the renaming activity as shown below. It displays:

- The number of records uploaded.
- Records ignored due to errors.
- Records successfully renamed.
- Records skipped.

Rename data file D:\List_Docum	ents_20250107_	123335.xlsx	
Record Type	Files	Folders	Total
Number of records uploaded			278
Number of records ignored (invalid)			0
Number of records validated.	255	23	278
Successfully Renamed	255	23	278
Failed (Not accessible, locked or not found)	0	0	0
Skipped (New name same as current name)	0	0	0
Details of files or folders that failed to rename	or were skipped	are recorded in	a log file.
ListAndRename	View	/ Log	Ok

View detailed information about files or folders that were not renamed and the

reasons, by clicking 'View Log' button.

Rename data file	nts_20250107_	123335.xlsx	
Record Type	Files	Folders	Total
Number of records uploaded			278
Number of records ignored (invalid)			0
Number of records validated.	255	23	278
Successfully Renamed	255	23	278
Failed (Not accessible, locked or not found)	0	0	0
Skipped (New name same as current name)	0	0	0
Details of files or folders that failed to rename of ListAndRename	or were skipped	are recorded in / Log	a log file. Ok

A log will open in a new window, showing entries for renaming records that were not processed. Below are examples of error logs. The log helps identify and correct data errors in the Rename Data File.

- Name, New name or Path is blank.
- Name, New name or Path contain Invalid Characters.
- Source file not found.
- Source folder not accessible.
- Unidentified error

Cleared Log

Below is an example of the file and folder names before and after renaming:

#### Points to Note

- The application checks the uploaded file for its type and blank records, then begins the renaming process by reading each record. It provides a status report detailing the number of files renamed or not renamed. Files and folders may not be renamed if:
  - They are not accessible.
  - They have been changed, removed, or locked by another process or user.

ListAndRename

## 4. Application UI

The application offers themes to suit your colour preferences. Select a theme from the drop-down menu. Theme options include:

Select theme from the drop-down menu. Theme Options shows below

**Big Stone** 

Cadet Blue

**Rich Black** 

**Carolina Blue** 

Light

### 5. Moving the Application Across the Screen

Hold the left mouse button on any blank area of the left panel and drag the panel/form to the desired location.

Minimizing/Maximizing the Application

Click the taskbar icon to minimize or maximize the application.

#### 6. Subscribing or Buying Add-On Features

Click the link label on the main application screen to access the Add-On screen. This link is visible only if no add-on is active (Base version or Trial version).

Select an option based on your use and anticipated requirements. Activate the Add-on and restart the application.

	<ul> <li>The toflowing Add-Ors unlock leatures that enable saving lists in Excel and CSV formats.</li> <li>To use the Reame function, an Excel or CSV file is required to create a custom reame list.</li> <li>Saving lists in Text format does not require an Add-On and is included for free in the basic version.</li> </ul>	
	Choose the plan that fits you best and unlock the full potential today!	
Annual	Our most popular choicel Get 12 months of full access for nearly the price of 10. Offering incervible paying and accurations.	7500.00

#### Log

The application creates a log at location,

WindowsDrive:\Users\<Username>\AppData\Local\Temp

with file name in format yyyyMMddListAndRename\_Log.txt.

For example,

C:\Users\admin\AppData\Local\Temp\20250101ListAndRename\_Log.txt.

In a rare scenario, if application encounters an issue, refer log to check the last message to check at what stage the issue was encountered.
